

PAYTON KELLEY

Dallas, TX | 972-903-7461 | paytonjkelley@gmail.com | [Check out my LinkedIn!](#)

Summary

Strategic and results-driven people leader with a robust technical background and years of experience in leading cross-functional teams to deliver innovative data products. Adept at applying Big Data Analytics, Master Data Management, Pragmatic, and LEAN Process Improvement techniques to solve high-value problems at a nationwide scale. Skilled in driving product vision, roadmap prioritization, and execution with a focus on data as a product. Exceptional communicator with the ability to articulate complex technical concepts to non-technical audiences and present to executives.

Key Qualifications

People Leadership: Committed servant leader with a proven ability to empower high-performing teams through mentorship, empathy, and collaboration. Skilled in fostering a culture of accountability, innovation, and continuous growth while aligning team strengths with organizational goals.

Product Leadership: Extensive experience in leading the development and delivery of data-driven products, from concept to execution, aligning with business goals and customer needs.

Technical Expertise: Extensive experience in data analytics, writing SQL scripts, and conducting database research to support product development and decision-making. Skilled in technical storytelling and translating complex data into business-aligned product narratives. Strong background in software and application management, with hands-on use of tools like Tableau, Postman, and JIRA. Proficient in fundamental cloud computing concepts and supporting full product lifecycles within Agile environments using modern DevOps and data integration practices.

Strategic Vision: Proven ability to collaborate with commercial product management leaders to define product features and roadmaps, driving successful go-to-market strategies.

Data-Driven Decision Making: Proficient in leveraging SQL for database management/research and Tableau to extract, analyze, and visualize complex data sets. Translating insights into actionable product strategies and compelling data stories that support planning, prioritization, and stakeholder alignment.

Experience

CoreLogic/ Cotality

Leader, Business Analytics and Engineering – Customer Experience | 2022 - present

- Lead a team of technical business analysts and integration systems engineers to manage, design, and support differentiating data products, applying Big Data Analytics and MDM principles.
- Maintain Product ownership and collaborate with Product Management and Alpha Development teams to define project scopes, timelines, and resource allocation.
- Foster innovation by introducing new tools, methodologies, and best practices, enhancing team efficiency and product quality.

- Present product strategies and progress to executives, aligning with business goals and driving the vision for data products.
- Perform advanced data analysis to generate insights, visualize performance metrics, and support data-driven product decisions.

PennyMac Loan Services

Data Analyst | 2021-2022

- Designed and implemented technical solutions for business-sponsored projects, focusing on data quality, validation, and reporting.
- Managed vendor relationships for application ownership, ensuring contract adherence and SLA compliance.
- Collaborated with management to contextualize data reports and deliver actionable insights.
- Utilized SQL to pull, analyze, and interpret data sets to support reporting needs, identify trends, and drive process improvements.

Mr. Cooper/Nationstar Mortgage Co.

Product Owner/Business Analytics | 2019

- Developed and maintained technology capabilities roadmaps aligned with business priorities.
- Managed IT standards for a portfolio of applications, ensuring compliance with change control and data management practices.
- Built strong relationships with internal partners, facilitating successful project execution and delivery.

PMG Retail and Entertainment

Data Analyst | 2017-2018

- Analyzed and transformed complex data sets to support production operations, client inquiries, and project work.
- Worked with business and IT stakeholders to define system requirements and translate them into actionable solutions.
